Ki67 (Clone MIB-1)
Mouse Monoclonal Antibody

Specificity: Human

Immunogen: Nuclear fractions of Hodgkin lymphoma cell line L248 of human origin

Ig Class: IgG1/k

Storage: Store vial at 4°C. When stored at 2-8°C, this antibody is stable for 24 months.

Description: The Ki-67 protein is a nuclear protein doublet, 345-395 kDa, playing a pivotal role in maintaining cell proliferation. In diagnostic histopathology and cell biology, the antibody has proven valuable for the demonstration of the Ki-67 antigen in normal and neoplastic cells, for example in soft-tissue sarcoma, prostatic adenocarcinoma, and breast carcinoma. The Ki-67 has been confirmed as a very powerful single prognostic factor for overall survival, with highly proliferative cases showing a much poorer outcome than tumors with low proliferation. In breast cancer, the proliferative index measured by Ki-67 immunoreactivity has both prognostic and predictive value.

Supplied As: Purified antibody with 0.2% BSA and 15mM sodium azide.

References:

Formalin-fixed, paraffin-embedded human tonsil stained with anti-Ki-67 clone MIB-1 antibody using peroxidase-conjugate and DAB chromogen. Note the nuclear staining of lymphocytes in a follicle.

Cat. #Z2305 (1.0 ml)
